If you have any questions or suggestions, do not hesitate to share them in the comment area below. If you still see the delay problem, there are some corrections more than to try. You do not need to know exactly what system is running your computer, you do not have to risk downloading and installing the wrong controller, and you do not have to worry about making an error during installation. If this last, please check the next solution below. 3) Open the Mods folder, and copy all the files. To change to 32 bits, select your platform: Steam or Origin, and follow the steps here. Next, double-click on the downloaded file and follow the on-screen instructions to install the driver manually. 7) Return to documents> Electronic Arts and, then, delete the SIMS 4. 3 folder) Click on the display tab, and check the information on your graphical card. Wait for the process to be completed. 2) Click Game Options. You can do it for free if you want, but in part it is manual. Otherwise, the problem of delay can be considered. If not, you should update your PC or play the game on another computer. Option 2 A «Automatically update the graphics driver If you do not have the time, patience or informal skills to update the graphics driver manually, you can automatically do it with Easy driver. Try these professional advice to solve the problem immediately. 1) Launch of the SIMS 4. 3) Select the Graphics tab. Then, restart the game to check if this method works. Check if the problem is solved or not. To update the controllers securely, there are two options: manual or automatically. If you have an impressive graphic card but the graphic controller is incompatible, It's obsolete, you'll find yourself with a constant delay in The Sims 4. The Sims 4 is certainly one of the best games to kill time and relax. 4) Scroll down to the ' section below and set the quality of the grapes to low or medium.
